Journal of Anatomy
Volume 222, Issue 1, Pages 1–160, January 2013

Introduction
1 Vertebrate Evolutionary Development Biology
A. Graham and Z. Johanson

Reviews
2 Development and embryonic staging in non-model organisms: the case of an afrotherian mammal
19 Incremental evolution of the neural crest, neural crest cells and neural crest-derived skeletal tissues
B.K. Hall and J.A. Gillis
32 The origin and evolution of the ectodermal placodes
A. Graham and S. M. Shimeld
41 Developmental and evolutionary significance of the mandibular arch and prechordal/premandibular cranium in vertebrates: revising the heterotopy scenario of gnathostome jaw evolution
S. Kuratani, N. Adachi, N. Wada, Y. Oisi and F. Sugahara
56 Early patterning in a chondrichthyan model, the small spotted dogfish: towards the gnathostome ancestral state
B.G. Godard and S. Mazan
67 Evolution and development of the vertebrate neck
R. Ericsson, R. Knight and Z. Johanson
79 Development and evolution of the vertebrate primary mouth
V. Soukup, J. Horácek and R. Cerny
100 The making of differences between fins and limbs
T. Yano and K. Tamura
114 The evolutionary history of the development of the pelvic fin/hindlimb
E.K. Don, P.D. Currie and N.J. Cole
134 Cranial muscles in amphibians: development, novelties and the role of cranial neural crest cells
J. Schmidt, N. Piekarski and L. Olsson
147 Evolution of the mammalian middle ear and jaw: adaptations and novel structures
N. Anthwal, L. Joshi and A.S. Tucker

Cover illustration: Lateral view of a 48 days-old embryo of the lesser hedgehog tenrec, Echinops telfairi. This afrotherian mammal was staged using the Standard Event System and has a crown-rump length of 31 mm. See article by Werneburg et al., ‘Development and embryonic staging in non-model organisms: the case of an afrotherian mammal’, in this issue of Journal of Anatomy (2013) 222, pp. 2–18.
